PROFESSIONAL SUMMARY

Frappe / ERPNext developer with 5+ years of experience building and maintaining school management and ERP systems in Python, JavaScript, and MariaDB, including payment, SMS, and email integrations. Hands-on experience across business-critical workflows including admission, enrollment, tellering, billing, payment allocation, grading, employee onboarding and offboarding, and user access management. Experienced in turning assigned tickets into delivered fixes and features on live systems. Career progression from junior to senior development, now owning the school management system and ERP Livro product. Product ownership experience adds strength in translating school business processes into delivered system features and coordinating delivery with development teams.

CORE TECHNICAL SKILLS

ERP & Frameworks: Frappe Framework, ERPNext, ERP Livro, Role Permissions, User Access Management

Programming: Python, JavaScript, SQL

Databases: MariaDB

APIs & Integrations: REST APIs, Online Payments, SMS Billing Gateway Integration, Email Notifications

DevOps & Infrastructure: Linux, Docker, Git, CI/CD

Also: React, TypeScript, Tailwind CSS (see portfolio demo); Product Ownership, Requirements Analysis

PROFESSIONAL EXPERIENCE

Product Owner

Livro Systems, Inc. | January 2026 – Present

- Own the school management system and ERP Livro, delivering feature and fix tickets with the development team.
- Build and maintain ERP Livro features for employee onboarding, employee offboarding, and user access requests.
- Maintain online enrollment forms and payment allocation so schools can enroll students and apply payments in the system.
- Delivered updates to enrollment status, tellering, billing, and SMS notifications from assigned tickets.
- Updated the SMS billing gateway from Smart to Globe so schools can keep sending billing notifications.
- Turn school enrollment, billing, and payment processes into clear, deliverable system tickets.

Senior Web Developer

Livro Systems, Inc. | April 2025 – December 2025

- Delivered feature and fix tickets on the school management system and ERP Livro.

Senior Web Developer
Wela School Systems | February 2024 – March 2025

- Delivered tellering and billing tickets covering payment status, fee allocation, matriculation, discounts, and statements of account.
- Delivered pre-enrollment and enrollment tickets for basic education and college, including enrollment status tracking.
- Maintained grading and SMS billing features supporting school operations.
- Configured system access and role permissions for finance and registrar users.

Mid-Senior Web Developer
Wela School Systems | September 2023 – February 2024

- Resolved billing tickets on live production sites, including ledger adjustments, discounts, and statements of account.
- Updated matriculation logic so excess discounts are credited against previous balances.

Junior Web Developer
Wela School Systems | March 2020 – September 2023

- Developed and maintained online enrollment forms for school admissions.
- Developed and maintained grade slips and grading rules, enabling schools to issue student results from the system.
- Developed and maintained college billing features for matriculation, fees, and the enrollment ledger.

SELECTED PROJECTS

College Admission and Enrollment (School Management System)
Problem: Enrollment was split across the application, subject list, fees, and approvals, with no single path from applicant to enrolled student.
My contribution: Built three connected forms (applicant, subject-and-fee, enrolled student), a four-stage approval workflow (Draft, dean, registrar, finance), unit-limit and term-fee validation, and a payment check before enrollment is locked. Re-running enrollment never overwrites an enrolled student.
Technologies: Frappe, Python, JavaScript, MariaDB
Result: A student moves from application to a locked enrollment in one system, with payments and approvals checked on the form instead of over email.

Account Closing and Cashiering
Problem: At the end of each term, cashiers could not close student accounts or post payments, which stopped the cashier desk.
My contribution: Made account closing run in the background and build student ledgers, added clear on-screen messages when a closing cannot start, updated down payment and reconciliation handling, kept overpayments on the student ledger, and fixed penalty due dates.
Technologies: Frappe, Python, JavaScript, SQL
Result: Cashiers can close accounts and post payments, including overpayments.

Online Payments and SMS / Email Integrations
Problem: Staff retyped online fee payments onto student accounts, billing texts used an outdated SMS provider, and some email digests were stuck unsent.
My contribution: Pulled online payments into school billing and allocated them to the student's fees, read payment links from school settings instead of hardcoded addresses, moved billing texts from Smart to Globe, and routed email digests through the default email account.
Technologies: Frappe, Python, REST APIs, payment and messaging integrations
Result: Online payments land on the student account without retyping, and billing texts and email digests go out on the current sender.

ERP Livro: Employee Lifecycle and Access Management
Problem: Employee onboarding, offboarding, and access requests needed to run in the internal ERP.
My contribution: Develop and maintain these features.
Technologies: Frappe, ERPNext, Python
Result: All three are handled in ERP Livro.

Also built: discount batches and report, basic education enrollment fixes, roles and data migration, grading fixes.
